Tip You can rename the tool as needed by pressing the F2 key. It's a good idea to make a descriptive label for each tool. # Using the Quick Selection Tool The Quick Selection tool (Q) is actually a selection brush (B). You can use it just as you would a paint brush, click in an image and paint a selection around an object to select it; or you can click over an object, click another object, or click an empty area to create a selection, like this: To use the Q tool, follow these steps: 1. **Select the Quick Selection tool (B)**. Be careful not to inadvertently select your whole image, and also be sure to hold the Alt/Option key down so that the tool isn't activated when you click elsewhere. 2. **Move the mouse over the object you want to select**. You see that three tool presets appear in the tool's toolbox. 3. **Choose the size of the brush that best matches your desired effect**. The brush options include the normal brush and a paint bucket with a drop shadow on one side. If you want to paint around an object, choose the normal brush, as shown in the margin. If you want to fill a selection with the paint bucket tool, choose the normal brush.
