A script can be written in AutoLISP for extensive customization of the entire drawing environment. AutoCAD also supports the XML drawing format (XMLDRAW) which allows the design process to be stored as XML files. XMLDRAW is a standard format for representing parts of the drawing. It is a CAD application file format based on XML (extensible markup language).

---

The XMLDRAW format is designed for use with a CAD application which allows for editing drawings and components, including line style, label, annotation, text, dimension, and model. The XMLDRAW format is based on the XML and SVG standards, so it is editable by a wide variety of XML editors, including Adobe InDesign, Microsoft Word, Textmate, Microsoft Notepad, BBEdit, Adobe Acrobat Pro, and others. RADAR 4.8 was the last CAD package to support XMLDRAW. The latest version of AutoCAD is 2011 (v. 20.0). Product history AutoCAD's first release was AutoCAD R12, which was released in June 1989 and is available for both MS-DOS and IBM PC operating systems. AutoCAD Version 1.0 was released in April 1992. This version had a focus on improving the speed of the graphics. It also introduced a new command palette, which allowed users to type a command from a list and then press a key or mouse button to execute that command. This was a major improvement over the previous systems, which used arrow buttons and hotkeys. AutoCAD 2000, released in April 1998, is the version used for the majority of the company's software. AutoCAD 2000 introduced the ability to create true polyline drawings, with the line feed commands no longer using 0.5 inch lines (linetype). The new line feed commands used the width of the line as a guide and created a linetype automatically. To complete the line, the user can optionally change the line width. The 2D line, curved line, and spline commands now require fewer moves to form and the 2D linetype commands were redesigned. The command palette was updated to have a button for each command. The set of ribbon buttons was limited to 18. AutoCAD R14 is AutoCAD's first major update in ten years. This release removed the linetype commands, adding a full set of 2D and 3D linetype commands.
