Related articles [How AutoCAD Works](#) AutoCAD operates by providing an intuitive, easy-to-use environment for creating 2D and 3D drawings. It has a simple, easy-to-follow workflow that allows a user to create detailed drawings in a few minutes or less. A drawing is composed of named elements and stored in a project. Each project includes one or more drawings and each drawing is composed of blocks. Blocks are the building blocks of drawings and are stored in a drawing. A block is a graphic element that is used to create elements like line drawings and shape drawings. A block can be composed of other blocks to create a 3D model. Blocks are constructed of lines, arcs, elliptical arcs, circles, and polygons. When you create a block in AutoCAD, you specify the properties of the block including the color, linetype, pattern, and linewidth. If you don't specify any properties, the default values are used. The properties of a block can be changed in the Properties palette. Lines, curves, and arcs can be connected together to create a shape drawing. Once you have created a shape, you can change the properties of the shape by editing the properties of the lines or curves that make up the shape. AutoCAD provides a variety of functions that allow you to easily view, edit, print, and export 2D and 3D drawings. It also includes tools that help you to create and view 3D models. It's important to note that AutoCAD is capable of supporting complex CAD operations. However, it can't do everything, so you will need to use other Autodesk applications for more complicated drawing tasks. Best of all, AutoCAD is widely used and is well-known among users. It is the standard CAD software that Autodesk products are based on. Therefore, AutoCAD has a huge market and millions of users. AutoCAD Category of Use According to the 2015 edition of Autodesk's annual State of the Industry Report, AutoCAD remains the most widely used and influential CAD software in the world. The report shows that the global market for CAD software is steadily growing. A total of 45.6% of respondents surveyed in the survey used CAD software at the end of 2014. Additionally, more than two-thirds of those respondents used
