BatToExe Free For PC

KEYMACRO is a batch file that uses a simple command line syntax to launch the process. It's basically a replacement for the Windows cmd.exe command launcher. As the cli app, it allows you to execute programs with very small and very big arguments. The arguments can be concatenated at the end of the command and the first argument is considered to be the command itself. For instance, the command line KEYMACRO emacs.bat C:\test\a C:\test\b C:\test\c will launch the emacs command with

C:\test\la, C:\test\lb and C:\test\lc as arguments. The command is executed in the following way: KEYMACRO emacs.bat C:\test\la C:\test\lb C:\test\lc ^Z^@^^^Y If there is more than one line, all arguments are separated by spaces. SET var1=c:\a^Z^@^^^Y SET var2=c:\b^Z^@^^^Y SET var3=c:\c^Z^@^^^Y KEYMACRO emacs.bat \$var1 \$var2 \$var3 If you want to launch a program with a specific working directory, you have to prefix the file name with the C:\ to make sure that KEYMACRO has the working directory as C:\WORKINGDIR: SET var1=C:\a^Z^@^^^Y SET var2=C:\b^Z^@^^^Y SET var3=C:\c^Z^@^^^Y KEYMACRO emacs.bat \$var1 \$var2 \$var3 If you wish to specify an absolute path for the command line, simply prefix the file name with the absolute path: SET var1=C:\a^Z^@^^^Y SET var2=C:\b^Z^@^^^Y SET var3=C:\c^Z^@^^^Y KEYMACRO emacs.bat \$var1 \$var2 \$var3 This is useful if the file name or the working directory is not known at compile-time: SET var1=C:\a^Z^@^^^Y SET var2=C:\b^Z^@^^^Y SET var3=C:\c^Z^@^^ 1d6a3396d6
