This project aims to examine the distribution of edible fruits and vegetables within the city of Graz, using a photo-container identification system. To achieve this, we first have to find out which characteristics which define a certain "type" of fruit or vegetable, and then use the photo-container identification system to differentiate the processed products. We have chosen the products from the specialties stores, the supermarkets and the grocery stores for this study. Different statistical methods were used to test the normality of the distribution. This study focuses on the type of products as well as their content, through their corresponding unit price, both per kilo and per kilo of fruit and vegetable. We have chosen several trends for the type of products to be studied in this project, such as 09e8f5149f
