I have a span with a click event on it. It executes a function: Click here! And: function myFunc() { /something } Question is: how can I use S(this) to pass the clicked span to myFunc() so that the function knows which span was clicked? A: If you're wanting to use it as a parameter, you can pass it to the function: Click here! The parameter is just passed into the function as such: function myFunc(e) { console.log(e); } You can also make the parameter the this of the function: Click here! then it will automatically be passed as the this of the function. Q: Conditional random variables and conditional probability I've been struggling to understand this answer for several days. Part I: Why there isn't a green-blue circle? I understand that this can be done with a conditional probability, or using a conditional random variable. Can anyone explain why it is more easier to do it using the conditional probability formula. I have a value derived from a Quaternion, for example UnityEngine.Quaternion.LookRotation(Vector3.down) or Euler(Vector3.up) This value represents a rotation. How can I easily convert it to a Vector3 so I can pass it into my graphics engine? Currently I have tried UnityEngine.Quaternion.Euler( rotation ), and other combinations. I'm using C# with .NET 4.5 and UnityEngine. A: Vector3 rotatedRight = new Vector3(rotation.X \* -1, rotation.Y \* -1, rotation.Z \* -1); This will flip the vector right. If you wanted it flipped left use - rotatedRight. If you are using UnityScript you can use the Rotate function which will flip the vector with the inverse of the vector and a number. For example, the function would look like this: new Vector3(rotation.X \* -1, rotation.Y \* -1, rotation.Z \* -1).Rotate(Vector3.inverse(rotation), -90); >get\_max\_cached\_size() const void set\_max\_cached\_size() bool reserve() void set\_owner( 3e33713323
