What's New In?

php form wizard is a strong, stand-alone tool for creating PHP scripts for the form validation and handling your forms from the users input. Your web forms and forms are so common in the internet, the most popular and common form is the Form Validation especially for the forms with file uploads. (Form Validation) v1.2 works on the following inputs: -Text -Number -File upload -Message box -Radio buttons -Select boxes -Check

---

boxes -Date -Time -Password -File upload

Note: For file uploads PHP Form Validation v1.2 only allows users to upload files to your server, it doesn't upload files to the users's PC.

How to use: Start php Form wizard for your project:

- Download php Form validation v1.2
- Unzip the zip file and open php Form Validation v1.2, the software will run automatically and all of the above options will appear.

•php Form Wizard main window •php Form wizard Options window

Note: Download the software from php form wizard is a tool that generates a PHP form validation script to process the form

Included Features:

- All form elements and their required parameters are validated
- You can choose to use MySQL database instead of text file
- Send auto responder (email) to your visitor with all of the form fields data
- Create text files or Mysql database fields to store the form data
- Regex

---

and Anti Spam Regex can be added to your script

- Password strength indicator
- Integration with Input Validation Framework (IVF)
- There is a condition to show auto responder, whether to send email to the form owner or not
- You can add unlimited number of the above condition
- Link to email auto responder template

If you do not have an auto responder, then you can add a few lines of code in the auto responder script to send custom emails or display a message box

Any issues related to input validation can be easily addressed in a single script file generated by php form wizard. The output script is valid php script that can be uploaded to any server on the internet or to your local server.

- Create your own PHP scripts and we don't do anything about that (unlike several
