Use Windows Keyboard Macro Utility to record macros from keyboard using keystroke. KeyMacro provides virtual keyboard and mouse emulation, hence no hardware interaction is required. It's an essential application for any Windows user. KeyMacro Features: * Create shortcuts to your frequently used commands. * Set KeyMacro as your Windows taskbar icon. * Perform hotkeys with a wide range of shortcuts. * Control volume, brightness and display settings. * Stop the program for a specified period. * Set the program as your startup app. * Auto complete your login and logout. * Switch applications and windows quickly. KeyMacro Review If you're a fan of Windows shortcuts, KeyMacro is just what you need to create your own. Although it's definitely not a replacement for an application like AutoHotkey (but it can come in handy as a lightweight alternative), it does the job efficiently. If you create a shortcut to a frequently used command, you'll have the possibility to add a keyboard shortcut for that function. However, you won't be able to assign any hotkey that hasn't been assigned to a shortcut on the system. The program also offers a wide range of hotkeys for volume and brightness adjustments as well as for display settings. The tool features an auto-complete function for user login and logout as well as the ability to switch applications and windows without having to manually do so. Evaluation and conclusion Although it's not an absolutely essential tool, KeyMacro is definitely a useful shortcut creation and hotkey application. It takes care of many of the most frequent Windows tasks, and its light resource footprint makes it suitable for use in any device.
