Such a data transmitting device, which is known from French patent document FR 2.725.799, includes a head mounted on the watch strap, to which a frame is connected by two flexible electric cables. The frame is itself attached to the bracelet of the watch. This device is relatively bulky and is therefore not suitable for use with a standard watch strap. The main object of the present invention is to provide a device which can be mounted on a standard watch strap without creating any aesthetic problem. According to the invention, the data transmitting device includes two flexible electric cables which are respectively attached to a frame connected to the watch strap by a single flexible electric cable, wherein the device includes two flexible electric cables which are respectively attached to a frame connected to the watch strap by a single flexible electric cable, wherein the device includes means for transmitting data between the watch and the frame. In the present invention, the frame can be attached to the watch strap by two flexible electric cables, one of which is attached to the frame and the other of which is attached to the watch strap. The data transmitting device is thus practically integrated into the watch strap. In addition, the frame is attached to the watch strap by a single electric cable, which is disposed between the two electric cables. This single electric cable is sufficiently flexible so that it allows the frame to be attached to the watch strap without creating any aesthetic problem. The present invention also provides a watch with an electronic module, wherein the electronic module is associated with an image generator, means for controlling the image generator, and means for storing data. The electronic module is electrically connected to a data transmitting device. This electronic module is attached to a watch strap by two flexible electric cables, one of which is attached to the electronic module and the other of which is attached to the watch strap. Once the software is installed and activated then extract the whole package and run the Autodesk-Autocad.exe file. Then run the Autocad licensekey.exe file. There you go, easy peasy! Let me know how it goes :) V Vadim Sammy Creating Our Own Reality A Moment in Time I woke up the next morning, rested in the warm summer heat, feeling the breeze gently blow. I enjoyed my early morning walk around the yard, it was good to breathe deeply and enjoy a moment in time. As I watched the animals return from the fields, the sounds of birds and crickets filled the air. A moment in time, and that was my morning. The night before, I had dreamed of waking up to the crunch of crisp autumn leaves under my feet and smell of the air as the cool breeze brushed across my skin. That was my morning. Throughout the day, I could notice the changing seasons by the changing colors of leaves. As I saw them fall, all I could think was: This will be a moment in time, my last autumn. It was a moment in time, and that was my day. A Journey in Time Early in the morning, as the sun began to rise, a moment in time, I began my journey. I started my walk toward my destination, the journey in time was beginning. But, I did not walk alone, there was a guide with me. He was wearing a smile, he was getting me ready for the next stage of the journey. He was getting me ready for the climax of the journey, the time to arrive at my destination. As I felt his hand on my shoulder, guiding me to the next stage of the journey, it was the next moment in time. He was there with me, as I walked through the streets of the city, another moment in time. The day was filled with moments in time, one after another. As I went through the day, there was a sense of euphoria that came over me as I walked through each moment. My journey, filled with joy, happiness, laughter, and love. Each moment in time seemed to become one of the greatest moments in my life. And it was, it was my day. A Journey in Space As I walked through the city, I became restless. Something was missing, something was wrong. I tried to
