Use imported footprints to place and/or snap to objects. Use imported footprints to add and subtract hatch sizes, arc sizes, and splines. Set up the first object on imported coordinates. Add imported details. Add and subtract components from imported plans. Add and subtract imported points. Add and subtract imported linear or radius segments. Assign colors or styles from imported parts lists. Perform standard and script-based process tasks on imported objects. Apply filters to imported objects. Add and subtract imported features. Create working drawings on a part of the drawing that is imported, such as the front or rear of a house. Complete script-based processes on imported objects. Add, subtract, or ignore imported graphics. Add, subtract, or ignore imported objects. Import several files in one step. Import CAD files from other applications. Add footnotes to imported views. Add comments to imported views. Assign metadata to imported views. Add, subtract, or ignore imported objects from another view. Import or export individual views, based on a particular object. Assign points from imported coordinates. Import existing 3D models. Simulate topography for an imported location. Import multiple models at once. Import workgroup settings. Import workgroup settings. Use imported part lists to place components. When working on imported 3D models, use a single X, Y, and Z axis to move from model to model. Use imported topology to prepare the way for another imported project. Work with imported plant files. Use imported linear and arc features to produce curved parts. Add and subtract imported layer definitions. Import layers as groups
