In this section, we will look into the general features of KuTools for Excel and its enterprise-focused add-in that will be more in-depth. Kutools for Excel is a free tool that combines several Excel functions into a single, easily accessible and user-friendly interface. The application comes with two tabs that serve as a shortcut to all its features and tools: the first one is available for all worksheets and contains general, common tools, while the other is focused on enterprise, and is available only if the latter option is selected. Kutools is only available as a full add-in for Microsoft Excel 2010 and later. This means that it requires a fully functional Excel. This is also the case with some of the tools, which means that they do not work with the toolbar. As a matter of fact, the only tool that can work from the toolbar, is Super Filter, which is an automated feature that lets you extract data from your workbook according to specific requirements, such as specific patterns and a specific number of characters. The first and most important thing you will notice upon loading the add-in is the UI. Its streamlined interface makes it easy to explore and navigate the hundreds of tools available. We have two tabs that will be used in this section: General, the first tab that contains the general features, tools and options that you can access with the second tab. Enterprise, which will be more in-depth and include advanced tools and features. When the add-in is activated, the first tab will appear as a toolbar that will host all the tools and options, including the Enterprise tab, the respective section, and all the features that the latter contains. The General tab, on the other hand, will be present on the Excel worksheet and will be related to all functions contained in the add-in. Once you click on any tool, the respective dialog window will open up. These are the only windows that will appear when the add-in is activated. All of the tools, except for Super Filter, are related to Excel. They are not an external executable, but rather a series of add-in dialogs. The Enterprise tab, on the other hand, is more advanced and includes both external tools, which are also available on the toolbar, as well as ones that are not accessible via the general tab. The tools and options contained in the second tab will only be visible if the add-in is activated.

- **Enable MACRO:** The one and only condition to execute this tool is to select an option with the macro.
- **Save File:** The macro will allow you to save a new file, replace the existing one with new information or change the name of the old one.
- **Name:** This option allows you to enter the name of the new file, and it will be used to work with the macros and applications.
