****University-based:**** Check out the Photoshop website of your school's department of imaging technology; e.g., www.uillinois.edu. Photoshop has been in the forefront of digital imaging technology for over 20 years. Over this period, it has gone through many changes and improvements. You can learn Photoshop and other tools in a number of Adobe products, including InDesign, Illustrator, and Dreamweaver, as well as the other Adobe applications. Photoshop is geared to the professional and is

often used as a tool in web design for doing graphic work. If you want to know what Photoshop can do to create images (besides doing the obvious, like altering colors, outlines, and layers) and how you can play with its features and use it for online graphic design, you'll need to become familiar with it.

Q: How to make query in VBA using text box to search through multiple rows How do I create a query in VBA to filter data based on values in a textbox? I am wanting to find a line in the following example table that matches the textbox value:

ID	Name
XXXX	1234567890123456
AAAA	1234567890123456

```
||  || BBBB || 1234567890123456
||  || CCCC || 1234567890123456
||  ||_____||
```

I have tried the following but it is always returning 0 rows: Dim cmd As New ADODB.Command Dim rs As ADODB.Recordset Dim i As Integer Dim string As String 'Enter a list of names 'Prompts for each name i = 1 Do While i <= rs.Fields.Count Then If rs.Fields.Append("name", adVarChar, 10).Value = string Then

Q: How to simulate/create a button onclick and return in a pure javascript function? I'm trying to simulate a button click in a pure JavaScript function and return a string that represents the onclick event. At this point I have something like: `window.onclick = function() { return "return_onclick"; }` but it's missing a lot of other important stuff. I have no handle over HTML, CSS, or even if this is the right function to be using here...so if anybody can help, please show me the correct way. A: Try to

use this example: `var functionName = function() { return "event name"; } functionName.toString = function() { // if you need to return a string return "event name"; } eval(functionName); //return true;`

A: `function request() { alert("clicked"); } window.onclick = function() { request(); return; } - 8`
