To learn in a beginner-friendly manner, Photoshop Elements is the perfect product for a first-time user. Working with the Custom Toolbox The Custom Toolbox makes editing much easier for the average user. It’s like a basic version of Photoshop’s history window. When you're finished, you just want to put the changes back the way they were before. This is much easier in Photoshop Elements than it would be in Photoshop with the command line. 1. Field of the Invention The present invention relates generally to a method and apparatus for scraping or abrading an object, such as in particular a golf ball, with a mechanical member such as a metal club or the like.

2. Background It is well known in the art to use mechanical members or tools such as golf club or the like to perform such functions as cleaning or removing debris, fragments or the like from an object. Golfers often use a variety of cleaning agents, such as water, grass, and a variety of specialty products. Frequently, such cleaning or application agents are insufficient for removing all traces of debris from the surface of the ball. Thus, there is a need for using a mechanical tool to accomplish the same result. However, it is desirable to avoid the use of chemicals inasmuch as such chemicals are not always benign. There are various golf courses using golf balls that must be perfectly round. Balls that are misshaped will, of course, not perform well. It is desired that such balls be cleaned at regular intervals using a mechanical member such as a club so that all the debris on the golf ball surface is removed. It will be appreciated that this requires a mechanical cleaning approach, and not a chemical approach. The scraping or cleaning of an object may be accomplished with a variety of mechanical members. For example, it has been known to use a metallic, spherical, swinging type broom, such as a golf club, to abrade or clean the surface of a golf ball. Such clubs have been known to be either naturally formed or formed in the shape of a hand held golf club, and are configured to embody a specific shape and configuration. U.S. Pat. Nos. 5,156,480 and 5,302,353 represent such known prior art club members. Further, it has been known to use a flat, xe2x80x9csteelxe2x80x9d or xe2x80x9crehos
