The setting for the problem is the standard notion of a curve with curvature  $k = \frac{d^2x^{\mu}}{ds^2}$ . There is the notion of a the representation or parametrisation,  $\phi(s) = (x(s), y(s))$  and then there is the notion of the tangent and normal. But the main difficulty of the problem lies in how they are related. If one is told that there is a plane  $P$  tangent to the curve at  $s_1$ , then presumably  $s_1$  is the point where  $\phi(s) \in P$ . But then one is forced to suppose that there is a general representation where a tangent space is a necessary condition. And then if one notices that  $P$  is not in the image of  $\phi$ , then one has to make a choice as to which tangent space. But if there were a curve which wasn't locally one dimensional, one would have to make a choice as to which curve to use. But what is the fundamental difference between these two? I understand the intuition that for a curve in three-dimensional space, the vector field of the derivative must be orthogonal to the curve but beyond that, the two notions seem to be completely equivalent to the first. One might suppose that the reasoning is that  $n(s)$  is somehow attached to  $P$ , but this seems unsatisfactory since it requires one to choose a specific representation of a curve. I have seen two different explanations: one is that the tangent at  $s_1$  is  $\phi(s_1) + t(s_1)$ , but I would say this implicitly assumes that the tangent field is a vector field, since it is presumably normalised, and therefore it is attached to the curve at  $s_1$ . And in a sense that makes sense since the representation only has one vector at a time. But this is confusing. The second explanation is that in a neighbourhood of

And this is the error I get when I run x3gvc again: arackx3gvc: usage: x3gvc [options] [file] arguments must be one or more X3GuvcExports How can I get x3gvc to work? A: I found the answer elsewhere. It was something with the way I moved files. I had a Windows 7 VM with ESXi 4.1. I had ESXi 4.1 Developer Edition installed on it. I moved the files from the Windows 7 VM to the ESXi host but I did not copy the folder that contained the Virtual Machine from the Windows 7 VM to the ESXi host. I added the directory that I copied from the Windows 7 VM to the ESXi host to the PATH. And that's it. Now the x3gvc.exe works. of Málaga, La Almudaina, Serrano. Colonia: C. Málaga, C. Aldadamar, C. 'i did not scan other files on this folder! I got a virus and infected this machine! I hope you can help me, then! A: You are storing your data in your Downloads folder and Desktop folder. You need to examine your operating system's settings or at the least back up your data. Because the volume has only 20GB of disk space it will need a clean install of Windows. And that means you have a lot of work ahead of you. Running the anti-malware from inside the OS might not work because many of those are currently not able to detect these viruses. You will have to re-install Windows as well. Plus the antivirus program that the anti-malware from inside the operating system uses may cause even more issues. You should review all the settings of your antivirus program and make sure that it is able to prevent these viruses. Blame it on the Mayweather-Pacquiao Payout or El SuperBowl, but the California State Athletic Commission will be forced to make major changes to the way that sportsbooks use the out-of-state odds that it awards to college football and NFL teams. The CSAC, like most states, gives a commission fee of 25 percent of the gross of out-of-state wagers placed in the state on the day of the college football bowl games and NFL Pro Bowl. But they're obligated to award that commission fee to the state's track and field and volleyball teams, and if there are no out-of-state sports involved, the commission has to give the money back to the state. That's why they awarded a \$24,000 commission fee to Southern California's USC Trojans for that 15-15 tie with Ohio

---

State in the Rose Bowl on New Year's Day. And why that same commission fee was given to the University of Southern California for that 38-31 loss to Notre Dame in the Rose Bowl last month. But that commission fee was only \$73,000, which means that \$61,000 of the commission fee was taken away because the college football game was won by the out-of-state school, and the other \$20,000 was taken away because the Notre Dame-USC game had no out-of-state winners. "We also need to look at the numbers of out-of-state lines that we are paying to the [college] football schools and
