If you have some drivers that you want us to share, please fill the form below and we will share them immediately. About Us Shenzhen Annibo Technology Co., Ltd. is a professional manufacturer in the field of memory and storage device. Our company had three subsidiaries, two offices and a research center. We made a number of models, including USB Flash, 2.5"/1.8" HDD/SATA, SATA6G, SSD/PS2, wireless mouse, keyboard and Chinese input for visitors.Q: Internal Facing iPhone App I'm looking for a way to develop an internal facing iPhone application, you know for internal staff in my company. What I'm looking for is: App should be able to sync with backend database (so one user has one username, others user should have one username too but with different company username), so that staff can login with their company username/passwords

in app. Sites they'll be reaching the app from, so they have to enter their company username/passwords again and again before they can use the app. Views - I wish to use UITabBarController, so I'm looking for a way to remove and replace the menu tabs with one menu bar - so that all the guys are facing the same menu (one on top) My question is: Is it possible to code all of the above in the iPhone (Objective C)? Does Apple / Cocoa Touch support all of this? If yes, Please add any links - books - tutorials - any resources for me to look into. A: I'm assuming you're asking how to create a fully internal facing app. If so, there's nothing stopping you creating that kind of application. The UIKit framework provides you with all you need to do this. For example, say you wanted to have a main menu, with which users can log in, and then you provide them with a single company account. Your UITabBarController would look like this: UITabBarController | UINavigationController | | UINavigationController | | | UITabBarController | | | | UINavigationController | | | | | U

Technical Field The present invention relates to a technique for effectively making an external connection in a wireless communication device. 2. Description of the Related Art It has been known that different radio frequencies are used for communication in different wireless communication systems. In North America, AMPS (Advanced Mobile Phone Service) using a cellular system operating on the frequency band from 824 to 893 megahertz (MHz) has been provided for a cellular phone, a mobile phone and the like in a conventional cellular phone communication system. On the other hand, in Europe, GSM (Global System for Mobile Communications) using a cellular system operating on the frequency band from 880 to 960 MHz and DCS (Digital Cellular System) using

a cellular system operating on the frequency band from 1710 to 1785 MHz have been provided for a mobile phone, a mobile phone and the like. Some cellular phones use a plurality of antennas to perform multi-
