A: The problem is your drive has become damaged - check it with Drive Sentinel. Run it on your whole drive to identify the worst issues, and then you can pick the data you want to recover. If you can't do that, then defrag your drive - that's your best bet. Assuming you are using the Windows disk manager, you can do that from the Explorer window. Some files can be recovered using a professional data recovery company, such as "Data Rescue" - of course, that's going to cost a lot. In the meantime, take a look at the advice given above.

Q: SQLAlchemy: inline select does not work I'd like to apply some select statement in my query, to get only specific values from one of my columns. So I've tried like this: `query = session.query(MyModel) query = query.options(joinload=True).select_from(['field1 AS "Product", field2 AS "Price", field3 AS "Stock"',]).add_columns("Price", "Stock", func.abs(field3 - field2),).limit(self.limit)` But the result is: `(43748, "", 'IntegrityError', 'The following attributes do not exist or are not unique: field1 as "Product", field2 as "Price", field3 as "Stock": [u'1111', u'S', 6, u'Tri', u'4', u'Prog', u'1', u'Ola'])` [SQL: u'SELECT "field1", "field2", "field3", field3 - field2 AS "field3", "field4" FROM "MyModel" WHERE field3 - field2 > 6'] (Background on this error at: However, if I do the same thing like: `query = session.query(MyModel) query = query.options(joinload=True).select_from(['field`
