windows.[Cardiac changes in bronchial asthma]. The authors,
with special regard to the necessity of continuous medical
supervision of bronchial asthma, stress the dangerous
complications of the disease on the heart. They have observed
chest pain, palpitations, apnoeas, arrhythmia, conduction

disorders, atrial fibrillation, supraventricular and ventricular tachycardia, and myocardial ischemia. They discuss the aetiology, treatment and prevention of these complications. "Focal plane shutter" is a well known kind of shutter in which a focal plane shutter blade is made up of a plurality of shutter blades. It is known to provide a shutter comprising a first blade block and a second blade block which are arranged such that the axis of the shutter blade lies substantially parallel to the optical axis of a photographic lens, where the two blade blocks are interconnected by a sprocket chain which rotates the two blade blocks in a circumferential direction. In one known arrangement, the two blade blocks are driven by a pair of drive shafts extending from a motor which is arranged in a plane substantially parallel to the optical axis of the camera. A spring is arranged to bias the two blade blocks towards each other, such that the shutter will be open. In another arrangement, the blade blocks are driven by a motor which is arranged beneath the plane in which the camera optical axis lies, and extend outwards through the plane. The drive mechanism
