Set the required options in the Preferences dialog of the Autodesk Autocad Change the data of the new file Update your file with the "Save" menu in the Editing dialog and you will see that there is a new value in the data (in addition to the original data). Enter a new value in the data, exit the "Save" dialog, and you will see that the change was applied. Remove the keygen (thus removing the alteration of the data) Exit the application and load the file You will see the same change as before. Repeat steps 7-9 for the desired number of files As described by gartucion, the keygen works only with the "Save" feature and the "Export data". A: I don't have Autocad, but I did use a batch file to modify the xml file like this: for /f %%A in (c:\folder*.dwg) do (notepad "c:\folder\%%A.xml") The batch file will edit the file, and overwrite it with the new changes. I do not know if it is actually saving it, I would have to check that. Project Summary/Abstract This new application for a Mentored Research Scientist Development Award (K01) will provide the candidate with the support and resources necessary to transition to independence as a physician-scientist studying the pathogenesis and treatment of vascular disease. Under the guidance of his Primary Mentor, Dr. Roy Schwaeble, the candidate will focus on his development as an independent scientist and obtain training in biomechanical systems to complement his prior training in genomics and transcriptional regulation. Dr. John Kaplan, the candidate's Co-Mentor, is an expert in biomechanical systems and is Head of the Biomechanics and Biophysics Laboratories at the VA Greater Los Angeles Healthcare System. This laboratory will be the site for both collaborative research and training with Dr. Schwaeble. Dr. Kaplan is also an Advisory Board Member for the candidate's development. The candidate's research plan will investigate a novel molecular mechanism of endothelial cell dysfunction in vascular disease, which may contribute to the development of new therapeutics. Perturbations in intracellular calcium (Ca²⁺) dynamics are a central feature of endothelial cell dysfunction in vascular disease. The Ca²⁺ response to blood flow has traditionally been investigated in the
