The above procedure is applicable for the regular version of the software. Development Not much is known about the development process for Autocad. It is widely believed that Autocad is a developed internally by Autodesk, however, most of the code is not public. The code used in Autocad is not a simple derivative of the legacy AutoCAD. First of all, Autocad is an entirely new project that does not use AutoCAD code as a basis. Second of all, Autocad is an entirely different program that does not use any legacy AutoCAD code. Even if it was derived from AutoCAD code, the legacy code would be cut out. The Autocad code does use some of the legacy AutoCAD code. However, this is very little and cannot be said to be used heavily. The Autocad source code uses the legacy AutoCAD code with as few changes as possible. The Autocad team has always been a small group, estimated around 10 to 20 people. The Autocad development process is probably the most secretive of all Autodesk products, even more than the source code. The Autocad team is sometimes rumored to be the same team that is developing ArcGIS. For example, it is rumored that the two projects are the same. However, there are no public evidence that Autocad was started as a complete replacement for AutoCAD. On the other hand, the highly advanced code of Autocad does reveal some of the techniques used in Autodesk development.
