I have read that the processes in Python are different from the threads in Python, and there is no "process" structure provided by the Python language. A: A thread is like a stack of tasks/operations/functions. Each thread has its own memory, and each time you start a new task, you create a new thread. A process, on the other hand, is a group of threads that can communicate and share data between each other. Each process has its own virtual memory space. Q: How to expose PHP session variables into javascript? I have a few sessions that I want to store in PHP and access from JavaScript. I tried to do it via but I couldn't access anything. Is there a better way? A: I would recommend this library It is kind of a reimplement of PHP Javascript Interpreter. So even if there's a limitation in exposing PHP sessions, it should be quite useful for almost all cases. Here's an example : ca3bfb1094
